

Amendments to the Specification:

Please replace paragraph [0023] with the following rewritten paragraph.

[0023] Moreover, the processor 60 can independently control the brightness level of the first and second light sources 31 and 32. For example, when the first light source 31 is in ON state, the first state can be an ON state of a first brightness level, and the second state is an ON state of a second brightness level. The first brightness level is different from the second brightness level. Similarly, when the second light source 32 is in ON state, the third state can be an ON state of a third brightness level, and the fourth state is an ON state of a fourth brightness level. The third brightness level is different from the fourth brightness level. It is noted that the processor 60 can determine states of the first and the second light sources 31 and 32 according to the display information.
